

Single Motor Telescopic Fork Box Type Retractable Fork Logistics Equipment

Basic Information

Product Specification

- Highlight: Telescopic Fork Box Type,
Box Type retractable fork,
Logistics Equipment Telescopic Fork

Product Description

Single Motor Single Deep Telescopic Fork(Box Type)

Description

The telescopic fork of the stacker is widely used in the intelligent three-dimensional warehouse logistics automatic storage system, often in conjunction with the automatic stacker. It is the main picking or feeding mechanism for the stacker to access items in the three-dimensional warehouse. It has the functions of automatic extension and limit! It is directly installed on a stacker crane, or fixed lifting mechanism or mobile walking lifting platform. The stacker crane passes through the alleys between the shelves to complete the automatic storage or transfer of items!

Technical parameter

Maximum payload	0~200kg
Maximum length	200~1500mm
Motion speed	40/60m/min
Deflection with load	5-18mm
Fork positioning accuracy	±2mm
Motion repeatability accuracy	±3mm
Fork surface height difference	≤2mm
Drive mode	Motorized
Suitable Application	For box
