Product Description

To provide various solutions for the industry and to realise the automation of the entire process, such as from the wire drum to the wire stripping machine, from the terminal disc to the cable coiling station, from the finished product to the strapping and wrapping, storage, etc.

Change side-line warehouse layout, using upper level for storage and lower level for wire stripping to minimise manual material handling. Implement online material system and use AGV system for automatic material distribution. Use the weighing system for wire drums returning to the warehouse to record the weight of wire used in each production cycle, accurately recording production materials and useful for product traceability.
